

Internet Explorer 11 Browser (IE 11) causing problems with Townsend Web Cam.

If you go to the townsendmt web cam you will notice that the web cam opens but there is no picture.

Open up townsendmt.com (the HOME page) then click on the gear icon in the top right & click on "Compatibility View Settings" in the drop down list. Add townsendmt.com to the list, now try the site & the web cam should work.

You may also open the web cam in a different browser like Google Chrome (a free download) the only browser we know of that causes the problem with our web cam is Internet Explorer 11 (IE 11).

**Notice on January 2018 we had to change the IP Address of our web cam.**

If you are having problems clear your Browsing History. If you are still having problems follow the directions above. Also any direct links you may have made before the change will have to be deleted and remade to the new IP Address.
