SUBJECT

Update and Interim Guidance on Outbreak of Coronavirus Disease 2019 (COVID-19)

SITUATION UPDATE

Local and state public health officials and clinical partners are working closely to identify, investigate and respond to Montana's COVID-19 concerns and cases. Please refer to the topic areas below and attachments for specific guidance.

Epidemiology Update

To date, over 54,000 cases of COVID-19, including 737 deaths, have been reported in the United States, with community wide transmission identified in several states across the nation.

Montana is reporting 57 cases of COVID-19 as of noon on 3/25/2020. This number includes individuals living in Montana per CDC classification. Note that this number is different from the map on the covid19.mt.gov website which is including non-Montana residents who were diagnosed while in the state. To date, two hospitalizations have been reported. The average age of reported cases is 46.2 years (range: 13 – 81 years). Approximately half of Montana COVID-19 cases are female. Contact investigations have determined that the majority of cases are connected to travel outside of Montana, visitors who visited Montana while ill, household clusters, and events. There are some cases with undetermined transmission and others that are still pending investigation.

Clinician judgement is recommended for COVID-19 testing. It is not recommended to test asymptomatic individuals.

Test results from MTPHL are reported directly to providers. Results are also reported to local health departments, but it is the provider's responsibility to report results to the patient.

For the latest Montana updates including a map of cases: <https://covid19.mt.gov>

CDC case counts are found here: <https://www.cdc.gov/coronavirus/2019-ncov/cases-updates/cases-in-us.html>

WHO case counts can be viewed here:

<https://www.who.int/emergencies/diseases/novel-coronavirus-2019/situation-reports/>

Laboratory Update

The volume of testing at the Montana Public Health Laboratory (MPHL) has greatly increased and supplies are limited, so we continue to ask providers to be judicious when ordering testing and to work through their local health contacts to facilitate patient testing when highly suspect. To provide timely COVID-19 testing to those individuals who need it the most, the Montana Department of Public Health and Human Services (DPHHS) is providing guidance to healthcare facilities regarding where to send patient samples for COVID 19 testing. Please see the attached prioritization document.

In addition, we realize the shortage of viral transport media. The FDA has issued guidance regarding alternative transport systems. This includes Liquid-Amies-based transport media and dry swabs placed in saline. These two

alternative transport systems are acceptable at the MPHL and have been approved for use with the CDC EUA assay. Please click the following link for more information.

<https://www.fda.gov/medical-devices/emergency-situations-medical-devices/faqs-diagnostic-testing-sars-cov-2#troubleobtainingviraltransport>

Another option to help stretch resources of transport media, DPHHS has suggested to providers who use the 3 ml viral transport medium, they can aseptically remove 1 ml from the 3 ml tube and transfer it to a similar sterile tube. 1 ml is the minimum amount the state laboratory requests for testing.

Remember all specimens for COVID-19 testing need to be packed properly, in a box, and shipped in cold condition. Specimens that may have a delay in transport >72 hours should be frozen and shipped on dry ice.

Testing volumes have dramatically increased, which may impact turn-around times, and reporting times may vary. In addition, specimens received after 11:00 AM will generally be tested the following day.

For more information on specimen collection and transport, see the attached DPHHS Technical Guidance.

If you have questions, please contact the MPHL at 800-821-7284.

EMERGENCY MEDICAL SERVICES

EMS and Trauma Systems is working with EMS services to get them into Juvare's *EM Resource*. This is being done to obtain situational awareness about supplies of PPE and other supplies and transport ventilators. Services are also being asked to provide updates to their staffing levels, transport capability for suspected or known COVID-19 patients and availability for surge transport of patients. This information is being used to assess the state of readiness of EMS services and the potential capability for mutual aid. EMSTS does not have access to PPE and supplies but will use Juvare's *EM Resource* to help distribute supplies if they become available to Montana. EMS services are encouraged to work closely with their local DES coordinator for resource requests.

HOSPITALS/LONG-TERM CARE

Hospitals and PH should begin Surge Planning. The purpose of the Hospital Surge Plan Checklist and Resources is to assist hospitals in developing and/or updating their plans for response to a significant surge event, as well as to provide tools, examples and guides to assist with plan development and implementation.

<https://dphhs.mt.gov/Portals/85/publichealth/documents/PHEP/PDR/COVID19/surgechklst.doc>

Use of the EM Resource website increases daily. This website, owned by the Coalitions, provides a great dashboard for all healthcare and stakeholders to become quickly aware of the situation affecting healthcare. Hospitals are already using EM Resource. EMS has begun updates this week. Later this week we have a team building out the LTCF and Clinics.

PHEP DISTRIBUTION OF PPE

Montana DPHHS and Montana DES have been working closely to track incoming medical material resource requests from jurisdictions. As many of you know, there is high demand for these supplies and national shortages. DPHHS has received 1 of 2 shipments from the Strategic National Stockpile, with updates below, and has combine it with PPE from the Hospital Preparedness Program (HPP) cache and a shipment from North Dakota through the mutual aid system.

Strategic National Stockpile- Shipment #1 has been processed and supplies have been shipped to facilities. The attached spreadsheet outlines the approximate quantities that facilities can expect to receive. The amounts were determined based on available stockpile quantities, hospital bed counts, EMS runs.

An additional mutual aid request was filled for 50,000 masks, which has been received and will be delivered in conjunction with the SNS – Shipment #2.

Strategic National Stockpile- Shipment #2 is currently being shipped to Montana DPHHS. We will provide an update on allocation and quantities as soon as it is received.

Montana DES is also pursuing all other leads for medical supplies and materials. Local entities should continue to utilize local supply chains in addition to these efforts. The attached guidance was provided to local coordinators on the resource request process. *All resource requests* should be routed to the County DES Coordinator.

CLINICIANS

Please see attached letter from Dr. Greg Holzman describing testing advice and priorities.

LOCAL PUBLIC HEALTH DEPARTMENTS

As notified earlier by Kevin O'Loughlin, additional funds will be added to PHEP contracts to assist with COVID response. Please be prepared to review the COVID-19 Task Order (contract) and have your local commissioners be prepared to sign. The Task Order will likely be published this week.

Recommendations

Last week, CDEPI sent out investigation guidelines for local public health investigation of newly diagnosed COVID-19 cases, including contact tracing and reporting. An update will be provided by the end of the day. Please refer to these guidelines when working on a COVID-19 case. CDEPI staff will be working closely with local public health jurisdictions following this guidance for all COVID-19 cases.

Steve Bullock, Governor

Sheila Hogan, Director

Information for Montana Health Care Providers on COVID-19 Testing

March 24, 2020

Montana is aggressively working to contain the spread of COVID-19. Testing of symptomatic patients suspected of COVID-19 is critical to contain the spread in your community. Montana is currently not in the same situation as other states, such as California, New York, or Washington, which have moved from containment to mitigation strategies. As of today, Montana healthcare providers and local and state public health officials continue to work diligently to limit the spread of COVID 19. Therefore, we are asking you to test patients who have symptoms that are consistent with COVID-19.

Who should be tested?

Clinicians should use their judgment to determine if a patient has signs and symptoms compatible with COVID-19 and whether the patient should be tested. Influenza is still circulating, and we highly recommend patients are tested for influenza. Patients with COVID-19 may experience fever and/or symptoms of acute respiratory illness (e.g., cough, difficulty breathing). Notify local public health of all suspected COVID-19 patients per your usual channels. Working together we can help prevent the spread of the novel coronavirus in our communities.

Patients with suspected COVID-19 (whether testing or not) who do not require hospitalization should be isolated at home until one of two sets of criteria are met:

- At least 72 hours have passed since resolution of fever without antipyretics, the respiratory symptoms are improved, and at least 7 days have passed since the onset of symptoms; **OR**
- There is resolution of fever without antipyretics, the respiratory symptoms are improved, and there are at least two consecutive negative nasopharyngeal swabs collected ≥ 24 hours apart.

Local public health staff will aggressively work to identify contacts of positive COVID-19 cases and will require those contacts to quarantine for 14 days and monitor themselves for symptoms.

Laboratory testing capacity

Currently, the Montana Public Health Laboratory (MPHL) has test kits, and more are arriving from the CDC. Also, COVID-19 testing is available at many private labs. **The MPHL has not met capacity and has been able to run every test we have received each day.** However, with increasing testing we suspect capacity will be met. DPHHS will use the following guidelines to prioritize the test in to three tiers: Priority 1 (high), Priority 2 (moderate), Priority 3 (low). For testing that will not change clinical care, one may want to send those tests to a high throughput, high capacity reference laboratory (LabCorp, Quest, ARUP, etc.) for timely testing.

In addition, we realize the shortage of viral transport media. The FDA has issued guidance regarding alternative transport systems. This includes Liquid-Amies-based transport media and dry swabs placed in saline. These two alternative transport systems are acceptable at the MPHL and have been approved

for use with the CDC EUA assay. Please click the following link for more information.
<https://www.fda.gov/medical-devices/emergency-situations-medical-devices/faqs-diagnostic-testing-sars-cov-2#troubleobtainingviraltransport>. Another option to help stretch resources of transport media, DPHHS has suggested to providers who use the 3 ml viral transport medium, they can aseptically remove 1 ml from the 3 ml tube and transfer it to a similar sterile tube. 1 ml is the minimum amount the state laboratory requests for testing.

DPHHS testing priorities

Priority 1 (High):

- Hospitalized patients who have signs and symptoms compatible with COVID-19.
- Symptomatic high-risk individuals, such as older adults (age ≥ 65 years) and individuals with chronic medical conditions and/or an immunocompromised state that may put them at higher risk for poor outcomes (e.g., diabetes, heart disease, receiving immunosuppressive medications, chronic lung disease, chronic kidney disease).
- Healthcare workers who have signs and symptoms compatible with COVID-19.
- First responders, such as law enforcement, EMS, and child abuse and neglect first responders, who have signs and symptoms compatible with COVID-19.

These specimens will be processed and tested as quickly as possible in order to inform decisions related to patient care and infection control.

Priority 2 (Moderate):

- Individuals who within 14 days of symptom onset had close contact with a suspect or laboratory-confirmed COVID-19 patient, or who have a history of travel from affected geographic areas within 14 days of their symptom onset.
- Individuals who have respiratory illness, for which flu or an alternate etiology has been ruled out.

Priority 3 (Low):

- Asymptomatic individuals with confirmed contact with a case. These individuals do not need testing and should be in quarantine. If patient in quarantine develops symptoms, testing should occur.
- Asymptomatic individuals who have traveled from an area of known community spread of COVID-19. These individuals do not need testing and likely should be in quarantine. If patient in quarantine develops symptoms, testing should occur.

Thank you once again for all that you are doing to help keep Montana healthy and safe.

ADJUTANT GENERAL

COVID-19 Medical Resource Request Guidance

March 25, 2020

To: DES Coordinators

Montana Disaster and Emergency Services is closely collaborating the Department of Public Health and Human Services to respond to local medical resource requests. We are providing the following guidance to help streamline the ordering process. Resource orders that are submitted to the State Emergency Coordination Center (SECC) should not replace the existing efforts for local entities to utilize normal supply chains.

The SECC will notify local emergency managers if they receive requests outside of this process in order to validate and synchronize requests with local efforts.

The SECC is asking all local resource orders are submitted through local emergency operation center procedures, validated by the local disaster and emergency services coordinator or their designee. Medical supplies, such as personal protective equipment (PPE), should be submitted on the electronic reporting form at the end of this document.

You will receive a confirmation email upon submission. The SECC will route your request for processing. This information is critical as we allocate supplies from the Strategic National Stockpile and other sources.

When submitting a request for PPE, please note that the number requested is an individual number—for example, 1 glove = 1 glove, **NOT** 1 pair.

An order form is needed for each facility/organization needing assistance. If you have questions related to this process, please contact the SECC at 406-324-4777 or MTDES@mt.gov.

You can access the request form with the following link:

(press ctrl+ to follow link) [COVID-19 Medical Resource Request](#)

How do I order a COVID-19 PCR test?

We are not requiring pre-approval for testing, but we are asking facilities to be judicious with ordering and follow the prioritization guidance.

Please make sure to document signs and symptoms of COVID-19, or if you have highly suspect patients (hospitalized, healthcare workers, or first responders) in the comment section to help us prioritize these patients.

Epi consultation for these suspect patients is also helpful in identification.

Timing of Specimen Collection

Specimens should be collected as soon as patient is identified as a Person Under Investigation (PUI) regardless of symptom onset.

Specimen Types

Moving forward, CDC is now recommending collecting only a **nasopharyngeal swab** using only those with a synthetic tip (e.g., polyester, dacron) and an aluminum or plastic shaft. Do not use swabs with cotton tips and wooden shafts or swabs made of calcium alginate.

***Place swab into a single tube** of viral transport media or universal transport media, alternative options are available.

Specimen Storage

Refrigerate all specimens promptly after collection. Specimens should be shipped within 72 hours of collection on cold packs. **Only freeze if transport will be over 72 hours.**

Specimen Labeling and Documentation

All specimens must be labeled with:

- Patient name and a unique identifier, such as medical record number or date of birth
- Specimen type
- Date collected

How do I fill out the requisition

Use MTPHL's standard Public Health Laboratory Request Form and mark COVID-19 or write it in the "Comments" section.

Please contact MTPHL if you need a request form.

Be sure to fill out all Patient Information and Specimen Details, including Date of Onset.

When are results available?

PCR results are typically available the same day or day after receipt at MTPHL, depending on volume and priority. *Testing is being performed seven days/week at this time.*

How do I transport the specimen to the laboratory?

Specimens may be transported by courier or overnight by FedEx or UPS. Courier service has been expanded to include additional sites Monday through Friday only. Weekend pickup will be at the usual sites, but will also include Saturday. For more information see: <https://dphhs.mt.gov/publichealth/LaboratoryServices/CourierRoutesSampleDelivery>).

Specimens must be packaged as Category B and sent in **cold** condition (on dry ice if specimens were frozen.) **Package specimens separately from other specimens.**

Safety Note

Health care personnel collecting clinical samples from potentially infectious patients should follow infection prevention and control recommendations.

Sample processing should be performed in at least a Class II biological safety cabinet following a minimum of biosafety level 2 guidelines. Please refer to the CDC website for specimen handling and biosafety guidelines.

<https://www.cdc.gov/coronavirus/2019-nCoV/lab/index.html>

Who should I contact for testing information?

Collection supplies are limited, but we are trying to accommodate all orders.

MTPHL lab toll free number 1-800-821-7284

To provide timely COVID 19 testing to those individuals who need it the most, the Montana Department of Public Health and Human Services (DPHHS) is providing guidance to healthcare facilities regarding where to send patient samples for COVID 19 testing.

DPHHS recommends that specimens from individuals that fall within the following two categories (priorities 1 and 2) are sent to the Montana Public Health Laboratory for COVID 19 testing.

Priority 1 (High):

- Hospitalized patients who have signs and symptoms compatible with COVID-19.
- Symptomatic individuals such as, older adults (age ≥ 65 years) and individuals with chronic medical conditions and/or an immunocompromised state that may put them at higher risk for poor outcomes (e.g., diabetes, heart disease, receiving immunosuppressive medications, chronic lung disease, chronic kidney disease).
- Healthcare workers who are having signs and symptoms compatible with COVID-19.
- First responders, such as law enforcement, EMS, and child abuse and neglect first responders, who are having signs and symptoms compatible with COVID-19. in order to inform decisions related to infection control.

These specimens will be processed and tested as quickly as possible in order to inform decisions related to patient care and infection control.

Priority 2 (Moderate):

- Individuals, who within 14 days of symptom onset had close contact with a suspect or laboratory-confirmed COVID-19 patient, or who have a history of travel from affected geographic areas within 14 days of their symptom onset.
- Individuals who have respiratory illness where flu and strep throat testing has come back negative

DPHHS will process all tests that are received by the lab. We recommend that specimens from individuals in Priority 3 be sent to a high throughput, high capacity reference laboratory (LabCorp, Quest, ARUP, etc....) for timely testing.

Priority 3 (Low):

- Asymptomatic individuals with confirmed contact with a case but asymptomatic. (These individuals should be in quarantine and testing was not needed)
- Asymptomatic individuals who have traveled from an area of known community spread of COVID-19. (By current CDC guidelines many of these individuals should be in quarantine and testing was not needed)
- Specimens from any other individuals not defined as Priority 1 and 2
